FINISHING RECOMMENDATIONS

For best results use Cold film laminates (<140°F) is advised and a laminator with a soft rubber roller is preferred.

Warm Laminates: In order to get a good adhesion of the warm laminates the advised working temperature of 185-203°F needs to be used. However, when laminating at these temperatures there is a risk of the printed image becoming blurry due to melting of the toner. Good results can be obtained with warm laminates when following the instructions:

- Use media >140 gsm
- Use laminates > 5 mil
- Encapsulate the print
- Avoid mechanical stress on the print.

Hot film laminates, liquid laminates and transfer laminates are not recommended.

This information is presented as a general guide and is not a performance guarantee. The user should determine prior to use the suitability of the material for the specific application or purpose.

PRINTER COMPATIBILITY

Océ PPHR7 is recommended for use with the new Océ CrystalPoint® technology in the Océ ColorWave® 600/650 printer.
